SAP EWM Control Tower

The Challenge: Navigating the Post-Deployment Reality of SAP EWM

You have successfully implemented SAP Extended Warehouse Management (EWM), unlocking the potential for significant improvements in your warehouse operations. However, our experience across numerous industries has shown that the transition to "Business-As-Usual" can be challenging.

Clients often encounter:

- **Business Process Interruptions:** Initial stabilisation can be difficult, leading to disruptions in day-to-day operations.
- **Diminishing Initial Value:** The anticipated benefits of your SAP EWM investment may not be fully realised or sustained.
- **Process Inefficiencies:** Identifying and resolving bottlenecks in the new system can be time-consuming and complex.
- **User Frustration:** Operational teams may struggle with new processes and system functionalities, impacting productivity.
- **Underutilised Capabilities:** The full potential of your SAP EWM solution may not be leveraged, hindering optimal performance.

This suite is ideal for organisations with:

- Embedded or Decentralised SAP Extended Warehouse Management (EWM) deployments.
- A need to stabilise and optimise their Business-As-Usual SAP EWM operations.

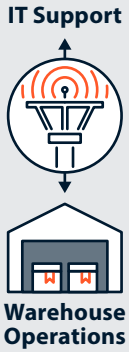

The HybridFuzion Solution: Your Dedicated SAP EWM Control Tower

HybridFuzion understands these challenges. That is why we have developed the SAP EWM Control Tower – a unique value-added solution designed to ensure your SAP EWM implementation delivers predictable, stable, and continuously improving warehouse operations.

Our Control Tower acts as a remote "eye in the sky," proactively monitoring your real-time SAP EWM environment. Manned by experienced operators fluent in both operational and system processes, the Control Tower identifies potential business process disruptions before they impact your service levels.

Strategic Positioning

Positioned strategically between your IT Support and Operations, the Control Tower serves as an operational and system superuser, proactively identifying and addressing complex SAP EWM challenges. This ensures your operations consistently meet and exceed service level expectations by resolving issues before they escalate.

The HybridFuzion Value Suite for SAP EWM: A Holistic Approach to Operational Excellence

SAP EWM Control Tower

A remotely operated hub providing continuous monitoring, proactive issue identification, and rapid resolution of business process challenges within your SAP EWM environment.

Deliverables:
Continuous Process Monitors
Continuous Improvement Report
Operator's Dashboard

Maturity Assessment

A thorough 7-module evaluation, providing a qualitative and quantitative understanding of your current system and operational maturity levels. This assessment identifies key areas for improvement and benchmarks your performance.

Deliverables:
Management Report
Strategy

Training & Development

A targeted program focused on upskilling your operational personnel. This program is aligned with your specific business processes and ensures your team has the knowledge and skills to maximise the benefits of SAP EWM.

Deliverables:
Onsite Training
Skills Overview Report
New Hire Onboarding

Control Tower Operations: Monitor • Dashboard • Continuous Improvement

What Value Will You Gain?

- **Proactive Operational Excellence:** Benefit from consistent, real-time monitoring across your inbound, internal, and outbound material flows, minimising disruptions and ensuring smooth warehouse operations.
- **Uninterrupted Operations & Expert Support:** Receive continuous, real-time support for operator inquiries, swift resolution of QRFC issues, and efficient management of warehouse master data, keeping your operations running smoothly.
- **Empowered and Proficient Teams:** Ensure your personnel are continuously upskilled for optimal system adoption and usage, maximising their efficiency and the value derived from your SAP EWM investment.
- **Accelerated Onboarding for New Team Members:** Quickly and effectively integrate new hires with a dedicated onboarding program, enabling them to swiftly utilise the system's full functionality and contribute to your operations.
- **Continuous Improvement & Innovation:** Receive ongoing expert advice on system enhancement opportunities and strategies for business process simplification, driving continuous improvement and maximising the long-term value of your SAP EWM solution.

Why Choose HybridFuzion?

HybridFuzion brings a wealth of experience in successful SAP EWM deployments across diverse industries. We understand the intricacies of warehouse operations and the challenges of adopting new technologies. Our Control Tower solution is built on this deep understanding, providing you with a proven approach to stabilise, optimise, and continuously improve your SAP EWM environment.
