Value Suite

HybridFuzion.

SAP EWM

# Rapid Deployment

## This suite is ideal for organisations who want to:

- Upgrade SAP Warehouse Management (WM).
- Transition from SAP Inventory Management (IM).
- Replace 3rd party Warehouse Management Systems (WMS).

## The Challenge:
### The Complexities and Delays of Traditional SAP EWM Deployments

Embarking on a new SAP Extended Warehouse Management (EWM) deployment, whether a greenfields implementation or an upgrade, can be a daunting undertaking.

Our extensive experience managing end-to-end SAP EWM programs has highlighted common challenges that often lead to:

- **Extended Timelines:** Significant time and effort are consumed in initial setup and configuration, delaying the realisation of business value.
- **Increased Costs:** Protracted deployments inevitably lead to higher implementation costs, impacting your overall ROI.
- **Diluted Focus on Risk:** The sheer complexity of traditional deployments can divert attention from critical risk management, particularly the crucial harmonisation between system and physical warehouse processes.
- **Program Setup Overhead:** A considerable amount of effort is required to establish the program framework before tangible progress is made.

## The HybridFuzion Solution:
### 16 Rapid Deployment Blueprints for SAP EWM Success

HybridFuzion has addressed these challenges head-on. Leveraging years of successful SAP EWM deployments across diverse industries, we have developed **16 cross-industry, adaptable RAPID deployment blueprints**. These blueprints are designed for both embedded and decentralised SAP EWM environments, whether you're starting fresh or upgrading your existing system.

Our blueprints provide clarity and direction right from the program's inception, focusing on six key pillars essential for a successful SAP EWM implementation:

- **System:** Streamlined configuration and technical setup.
- **Business Processes:** Pre-defined, best-practice warehouse processes.
- **People Development:** Targeted training and change management strategies.
- **Mobility:** Efficient integration of mobile warehouse technologies.
- **Network:** Robust and reliable infrastructure considerations.
- **Governance:** Clear roles, responsibilities, and decision-making frameworks.

## The HybridFuzion Methodology:
### Plug-and-Play Deployment for Accelerated Value

Our SAP EWM Rapid Deployment blueprints are engineered as "plug-n-play" solutions, designed for rapid adaptation to your unique business requirements and existing process capabilities. This approach ensures a balanced focus on people, processes, and infrastructure throughout the deployment lifecycle.

By providing a structured framework, our methodology drives quick and effective decision-making, and significantly reduces potential program and post-go-live risks that could impact your business continuity and sustainability.

# SMART Physical Supply Chain:
Rapid Deployment Blueprint

## Prepare

1. Strategic Alignment
2. Readiness Assessment
3. Business Requirements
4. Structure
5. Master Data

## Build

11. User Roles
10. Configurations
9. Control Tower
8. Mobility
7. Network Connectivity
6. Labelling & Signage

## Deploy

12. Change Management
13. Go-Live

## Run

14. Post Go-Live Support
15. Control Plan
16. Enhancements

## What Value Will You Gain?

- **Clear Program Direction & Robust Decision Making:** Gain immediate clarity and a well-defined path forward, empowering you to make informed and timely decisions throughout the deployment.
- **Simplified Processes & Enhanced User Adoption:** Experience a reduction in deployment complexity, resulting in a final solution aligned with easy-to-execute processes for all organisational users.
- **Accelerated Time to Value:** Achieve quicker realisation of the benefits of SAP EWM through our plug-and-play programmatic solutions.
- **Reduced Implementation Costs:** Benefit from a holistic deployment approach that optimises resource utilisation and minimises overall implementation expenses.
- **Mitigated Business Disruption Risks:** Ensure alignment between project deliverables and your critical business process needs, minimising the potential for post-go-live disruptions.
- **Assured Governance & Compliance:** Rely on clear governance processes adhered to throughout the deployment, ensuring a well-managed and compliant implementation.
- **Embedded Solution & Skilled Teams:** Foster seamless solution adoption through targeted change management and comprehensive skills development initiatives.

## Why Choose HybridFuzion?

HybridFuzion's deep expertise in SAP EWM deployments across diverse industries is the foundation of our Rapid Deployment solution. We understand the intricacies of warehouse operations and the challenges of technology adoption. Our proven blueprints offer a structured, risk-mitigated approach to accelerate your SAP EWM journey and deliver tangible business value faster.
